Minimal Annual Fee!

iSenseit.com™ Online Wireless Sensor Monitoring

iSenseit.com™ is a secure cloud based monitoring and notification system dedicated to Senseit Wireless Sensors and Gateways. The system allows for complete configuration and customization at a sensor, local network, or client wide level. iSenseit allows for management of sensor data as well as the ability to setup alerts via SMS text or email to one or many people. It is also accessible from all internet enabled devices including smart phones.

iSenseit.com Basic is included for free with all wireless sensors, providing basic features for you to configure and monitor your sensors online.

iSenseit Premiere allows for enhanced functionality of your wireless sensors and includes an advanced software feature set, all for a minimum annual cost. (For complete feature comparison see reverse side.)

System Requirements

- Internet access for USB and Ethernet gateways

Senseit Wireless Sensor Network Monitoring - Feature Comparison
